Sub-Nyquist Reconstruction System for Wideband Communication

INSTRUMENTS[™]

Summary

We demonstrate the MWC which samples multiband signals with unknown carriers at sub-Nyquist rates
The ADC converter acquires signals with bandwidth 1.8 GHz at a sampling rate of only 60 MHz per channel
The reconstruction algorithm reconstructs the signal at baseband using NI's Flex Rio programmed in LabView

A Reconstruction System Based On NI Flex Rio and LabView

High-level architecture
